Product Description

Factory PC Computer Flat Monitors 21.5 Inch 75hz White Lcd Monitors 1080p Computer Monitor

Screen Size

The monitor has a diagonal screen size of 21.5 inches, measured from corner to corner. The larger screen provides a more immersive viewing experience and allows for increased visibility and detail.

IPS Technology

The 21.5-inch LCD monitor utilizes IPS (In-Plane Switching) technology for its LCD panel. IPS technology offers improved color accuracy, wider viewing angles, and better color consistency compared to other LCD panel types. It ensures that the colors and image quality remain consistent, even when viewed from different angles.

Resolution

The monitor's resolution determines the number of pixels it can display horizontally and vertically. A typical 21.5-inch LCD monitor with an IPS screen has a resolution of 1920x1080 pixels, also known as Full HD or 1080p resolution. This resolution provides sharp and detailed images on the screen.

Color Accuracy

With IPS technology, the 21.5-inch LCD monitor offers enhanced color accuracy. It can display a wide range of colors and provides better color reproduction, making it suitable for tasks that require accurate color representation, such as graphic design, photo editing, and video editing.

Wide Viewing Angles

IPS screens are known for their wide viewing angles, meaning you can view the screen from various positions without experiencing significant color shifts or loss of image quality. This feature is particularly beneficial when collaborating with others or when multiple people need to view the screen simultaneously.
